MODULE DERMOGRAPH

“ Highest security for your success in the artistic skill ”

NEW MODULE DERMOGRAPH

Highest and most professional standards for security and safety

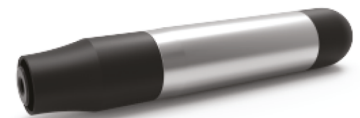

The double-layer anti-reflux system prevents the entry of body fluids into the dermograph to avoid cross-contamination. It is also equipped with a new cartridge system with integrated single-use needle. These mechanisms guarantee a closed hygiene chain, which is the optimum level of safety for the user and the end customer.

High accuracy. The needle guidance enables an implementation at precise and consistent depth with minimum vibration.

The powerful engine helps to reduce treatment time, causing less trauma, inflammation, reaction and improves healing.

Easy to clean and disinfect. It is one of the few dermographs that does not require ultrasonic cleaning or autoclaving saving you precious time after each client.

Easy handling, balanced construction and new ergonomic design. The Goldeneye hand piece connection cable meets the standards for medical products, stable connection with anti-twist protection.

WHEN PASSION MEETS TALENT,
THE RESULTS ARE ALWAYS SOMETHING EXTRAORDINARY
